

SSD Utility Suite™

The Ultimate SSD Tools and Utilities

Key Features

- **Drive Identification**
View detailed information on all drives in the system including model number and serial number
- **SMART Information**
See real time status of all attributes and conditions alerting you to a disk failure
- **Manual TRIM Command**
Take advantage of built in performance enhancement features on *any* Microsoft® OS*
- **Secure Drive Erase**
Securely erase all data on the drive with a simple command.

The SSD Utility Suite is an essential set of tools to provide performance enhancement, data security and firmware management for Solid State drives. More importantly, the utility suite is a proactive support tool, enabling customers to make informed decisions regarding their data – whether to back it up, erase it securely or optimize the drive using the TRIM command. Your company will benefit from greater customer confidence, fewer support issues and the ability to provide online firmware updates. This suite is designed to enable faster performance as well as extended lifespan of SSD's running on Microsoft® Operating Systems. The SSD Utility Suite gives consumers access to some of the unique features built into today's Solid State Drives.

All of our utilities have the ability to be highly customized and branded. OEM versions of the suite can be modified to include your logo, custom buttons, colors and icons and even interface designs. The ability to limit features and functions for competitive brands is also available. Adding support for your drives is a simple task.

PREDICTIVE FAILURE ANALYSIS

Provide customers advanced warning of an impending disk failure by real time SMART status monitoring of their SSD. This also monitors the EOL of the drive, as SSD's do have a lifespan, providing your customer the ability to secure their data and replace the drives before it's too late.

COMPLETE DIAGNOSTIC TESTING

Execute the built in tests you've provided to make sure the drive is functioning properly. These tests can vary from simple quick tests to exhaustive read and write tests to verify the integrity of the drive.

FIRMWARE UPDATES

Updating Firmware has never been easier. With the click of a button, you can download the latest firmware and create a bootable ISO CD or bootable USB stick.

TECHNICAL SUPPORT

All of our products are fully supported. Our Support Techs are available in the US and in Europe. Dedicated support contacts are assigned to all OEM's.

ZERO DEVELOPMENT EXPENDITURE

Using our SSD Utility Suite eliminates expensive software development time making an internal solution allowing you to focus on your core business. The solution is completely transparent to your customers.

TURNKEY SOLUTIONS

We're here to help. If you don't have the Technical or Creative expertise to customize your products, we can provide this to you as an "out of the box" type solution.

For more information on any of our products or services please visit us on the Web.

SSD Utility Suite Feature Set

- **SSD Management Tool** – Monitor and manage all SSD's in the system. Get detailed information on all drives, view information on the status of all SMART attributes and execute all built in SMART tests.
- **Manual TRIM Command** – Execute the TRIM command on any supported drive to maintain the write performance of the SSD. We include support for Microsoft AHCI and Intel Matrix Storage Manager on all MS OS's*. Scheduling the operation is available.
- **Firmware Update Utility** – Allow your customers to easily update the Firmware in their SSD. We can add support for your own update utility from within the suite or we can customize our proprietary utility to work with your drives.
- **Secure Erase** – Reset the SSD to factory fresh condition. Using the erase command executes the drives built-in command to

To help meet the demands of the global market, the suite is available in English, Spanish, French, German, Italian, Japanese, Traditional Chinese, and Simplified Chinese.

***Supports Windows XP SP 2, Windows Vista, Windows 7, Server 2003 and Server 2008 including both 32 and 64 bit versions and all released Service Packs on all MS file systems.**
